Sequence 22842, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO F

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

PILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142
                                                                                                                  FILE REFERENCE: 107196.136

Sequence 16, Application US/10790768A

Publication No. US20040209797A1

GENERAL INFORMATION:
APPLICANT: Karas, Michael

TITLE OF INVENTION: Intracellular Delivery of Small Molecules, Proteins, and
TITLE OF INVENTION: Acids
FILE REFERENCE: 002877.00028

CURRENT APPLICATION NUMBER: US/10/790,768A

CURRENT FILING DATE: 2004-03-03

NUMBER OF SEQ ID NOS: 25

SOFTWARE: Patentin version 3.1

SEQ ID NO 16

LENGTH: 15

TYPE: PRT
ORGANISM: Artificial Sequence

RESULT 1 ADS17630 04-MAR-2003; 03-MAR-2004; protein transduction domain; PTD; PTD-cargo moiety complex; cell immortalisation; cell viability; internalising peptide; 02-DEC-2004 ADS17630; 16-SEP-2004. Synthetic. cell transport. ADS17630 standard; peptide; 15 AA. 04-MAR-2004; 2004WO-US006445 WO2004078933-A2 Key Modified-site Amino acid sequence of a PTD designated Biotin-Lys-InvRP5. 2003US-0451243P. 2004US-00790768. (first entry) Location/Qualifiers /note= "biotin attached"

The specification describes peptides which function as a protein transduction domain (PTD), and are capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. The present sequence

New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.

domain,

WPI; 2004-653708/63.

                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a peptide which functions as a protein transduction domain (PTD), and is capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. The present PTD has a lysine linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 15 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.

The specification describes peptides which function as a protein transduction domain (PTD), and are capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo moiety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein transduction domain; PTD; PTD-cargo moiety complex;
cell immortalisation; cell viability; internalising peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  04-MAR-2004; 2004WO-US006445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO2004078933-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Amino acid sequence of a PTD

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. The present PTD has a lysine linker and a nuclear localisation signal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes peptides which function as a protein transduction domain (PTD), and are capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo molety
                                                                                                                                                                                                                                       WPI; 2004-653708/63

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. The present sequence represents PTD peptide used in an experiment to determine the transduction efficiency of inverted isomers of PTDs.
                                                                                                                                                                                                                                                                                      The present sequence represents a peptide which functions as a protein transduction domain (PTD), and is capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. The present PTD has a lysine linker and 2 nuclear localisation signals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated and purified polypeptide with a protein transduction domain useful for delivering small molecules, proteins and nucleic acids to an intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       04-MAR-2003;

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a publical process of the proc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo molety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated and purified polypeptide with a protein transduction domain, useful for delivering small molecules, proteins and nucleic acids to an intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein transduction domain; PTD; PTD-cargo moiety complex; cell immortalisation; cell viability; internalising peptide; cell transport.

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a publical localisation signal affects translocation of a PTD-cargo moiety

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. The present sequence is a reverse isomer of ADS17641, a previously identified internalising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; EIISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mitcham C
Zhang Y,
Barth B,
encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polymucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepare
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABM47044 standard; protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                             New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antigen-presenting cells that express the polypeptide); a method and kit correcting or determining the presence or absence of P. acnes in a correcting or determining the presence or absence of P. acnes in a correction. The P. acnes polypeptides, polymucleotides, antibodies, fusion proteins. T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne collapsetides are useful for diagnosing, preventing or treating acne collapsetides are useful for diagnosing, preventing or treating acne collapsetide. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present composition where the present contained within the P. acnes polymucleotides of the cinvention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from wife at fig.wipo.int/pub/published_pct_sequences

These

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease,

comprises detecting a with the disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

                        FUNCTION: Cuttlefish spermiogenesis is characterized by a conuclear protein transition: histones -- spermatid-specific proteins (T1/T2) -- protamines (S91/SP2). The protamines capperm DNA into a highly condensed, stable and inactive compounds.
sperm DNA into a highlesubcellular LOCATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       15

++

TISSUE SPECIFICITY:

Testis

DEVELOPMENTAL STAGE: Spermlogences.

PTM: Phosphorylation occurs at different degrees.

PTM: Phosphorylated form may be predominant in T2. (

rhosphorylated in elongated spermatids, but dephorylated in elongated spermatids)

n T2. SP2 appears dephosphorylated

is

FUNCTION: Cuttlefish spermiogenesis is characterized by a dou nuclear protein transition: histones -> spermatid-specific proteins (TI/T2) -> protemines (SPI/SP2). The protemines comp sperm DNA into a highly condensed, stable and inactive comple SUBCELLULAR LOCATION: Nuclear.

TISSUE SPECIFICITY: Testis.

DEVELOPMENTAL STAGE: Spermiogenesis.

PTW: Phosphorylated form may be predominant in TI. SP1 appears phosphorylated in elongated spermatids, but dephosphorylated in elongated spermatids, but dephosphorylated
